

GGE and 350Green to Bring Electric Vehicle Charging Stations to Hollywood and Beyond

Los Angeles (November 7, 2011) — Green Galaxy Enterprises (GGE) is proud to announce its representation of 350Green, a pioneering developer of electric vehicle charging station networks. GGE will work to build 350Green's profile in the entertainment industry, in cooperation with individuals and organizations that believe in clean electric transportation. GGE plans to introduce the company to multiple sources of green media and events, to garner greater visibility and recognition of its offerings.

As part of those efforts, GGE will make key introductions to EV-driving producers, directors and celebrities as well as facilitate attendance and participation in green parties, screenings and events. GGE intends to arrange collaboration to support and fulfill the need of 350Green's full service charging stations infrastructure and technology directly to the entertainment industry so they can access the company's products.

GGE's goal is to ensure 350Green has a presence at high-profile events in Hollywood and to represent the use of their brand when requested by television and film productions. Nicole Hansen will serve as a spokesperson at events and for interviews. GGE will also focus on submitting the founders of 350Green, CEO Mariana Gerzanych and President Tim Mason, to appear as speakers for intensive workshops, panel discussions, and conferences on clean technology and fostering sustainable solutions.

"We are excited to work with Nicole Hansen and Green Galaxy Enterprises to support our wide scale network of electric vehicle charging stations. We look forward to GGE helping us promote and publicize our efforts in the media and entertainment industries around Southern California. Both of our companies share a commitment to address global energy challenges and advance clean, dependable technology that everyone can use."

—Mariana Gerzanych, CEO, 350Green

"The entertainment industry is a great match for 350Green chargers, with so many celebrities and producers already proud owners of electric cars. Every driver of an electric vehicle will appreciate having charging stations at the studios and production companies, and we will all benefit from the cleaner environment."

—Nicole Hansen, President, Green Galaxy Enterprises

Green Galaxy Enterprises (greengalaxyent.com) is a renewable energy consulting business, focused on building partnerships among green technology companies, governments, educational institutions, and nonprofits. Seeking sustainable development with a humanitarian benefit, we help companies and organizations connect to raise their profiles through media, marketing, and event production.

350Green (350green.com) is a project developer that designs, builds and operates a scalable, nationwide network of EV charging stations. The company partners with retailers, commercial property managers, developers, and municipalities to locate charging stations at places near where EV drivers live and work. Current projects are underway in 15 major markets nationwide.
